Table of Contents

1. Executive Summary
2. Business Problem
3. Current State Assessment
4. Business Process Impact Assessment
5. Future State Vision
6. Business Objectives
7. Scope
8. Stakeholders
9. Business & Functional Requirements
10. Business Rules
11. Assumptions
12. Dependencies
13. Risks
14. Success Metrics
15. Next Steps
16. Related Project Artifacts

0.1 Versioning & Change History

Version	Date	Author	Description

1. Executive Summary

Provide a concise overview of the initiative, including:

- Business need
- Project purpose
- Strategic alignment
- Expected business outcomes
- High-level value to the organization

2. Business Problem

Describe the business challenges prompting this initiative.

Consider including:

- Operational inefficiencies
- Manual processes
- Compliance concerns
- Reporting limitations
- Data quality issues
- Integration challenges
- Customer or user pain points

3. Current State Assessment

Document the existing business environment.

Include:

- Current business processes
- Existing systems and applications
- Roles and responsibilities
- Current workflows
- Manual workarounds
- Reporting processes
- Known system limitations
- Existing integrations
- Identified bottlenecks

4. Business Process Impact Assessment

Describe how the proposed initiative will impact the organization.

Consider:

- Business processes
- Organizational roles
- Departments
- Upstream systems
- Downstream systems
- Reporting
- Interfaces and integrations
- Policies and procedures
- Training requirements
- Change management considerations

Example:

Area	Business Impact
Manufacturing	High
Inventory	High
Procurement	Medium
Finance	Medium
Reporting	High

5. Future State Vision

Describe the desired business environment after implementation.

Include:

- Future business processes
- Target operating model
- Expected system capabilities
- Automation opportunities
- Improved visibility
- Standardized processes
- Improved user experience
- Expected business benefits

6. Business Objectives

Define measurable project objectives.

Examples include:

- Reduce manual processing time
- Standardize business processes
- Improve reporting accuracy
- Increase operational efficiency
- Improve data quality
- Enhance user experience
- Support organizational growth
- Improve regulatory compliance

7. Scope

In Scope

Document:

- Business functions
- Business processes
- Oracle Cloud modules
- Applications
- Interfaces
- Reports
- Data conversion activities

Out of Scope

Document:

- Deferred enhancements
- Future project phases
- Non-impacted departments
- Excluded integrations
- Legacy applications remaining unchanged

8. Stakeholders

Identify all project stakeholders.

Typical stakeholders include:

- Executive Sponsor
- Business Owner
- Process Owner
- Manufacturing Manager
- Supply Chain Manager
- Finance Representative
- Business SMEs
- Business Analyst
- Oracle Cloud Functional Consultant
- Technical Lead
- Integration Developer
- QA/Test Lead
- Project Manager
- Change Management Lead
- End Users

9. Business & Functional Requirements

Capture the project's high-level requirements.

Each requirement should include:

- Requirement ID
- Requirement Description
- Business Justification
- Priority (High / Medium / Low)
- Owner
- Status

Example:

ID	Requirement	Priority	Owner	Status
BR-001	Automate production work order approvals	High	Manufacturing	Draft

10. Business Rules

Document the business rules governing the solution.

Examples:

- Approval rules
- Security rules
- Compliance requirements
- Data validation rules
- Workflow rules
- Segregation of duties
- Inventory policies
- Financial controls

11. Assumptions

Document assumptions necessary for project success.

Examples:

- SMEs will be available.
- Oracle Cloud environments are provisioned.
- Required data is accessible.
- Project funding is approved.
- Business users will participate in workshops.

12. Dependencies

Identify project dependencies.

Examples:

- Oracle Cloud environments
- Third-party integrations
- API availability
- Data migration readiness
- Security role configuration
- Infrastructure availability
- Vendor deliverables
- Business approvals

13. Risks

Document potential project risks and mitigation strategies.

Examples:

- Poor data quality
- Integration delays
- User resistance
- Resource availability
- Timeline constraints
- Scope changes
- Incomplete requirements
- Training delays

14. Success Metrics

Define measurable indicators of project success.

Examples:

- Reduction in manual processing
- Increased reporting accuracy
- Improved inventory visibility
- Reduced approval cycle time
- User adoption rate
- Fewer production delays
- Improved process compliance
- Increased operational efficiency

15. Next Steps

Typical next activities include:

- Conduct stakeholder workshops
- Validate business processes
- Finalize project scope
- Complete requirements gathering
- Develop process flows
- Create user stories
- Prepare Solution Design Document
- Plan User Acceptance Testing (UAT)

16. Related Project Artifacts

This BRD supports and should remain aligned with the following project documentation:

- Stakeholder Analysis
- Current State Assessment
- Future State Process
- Process Flow Diagrams
- Gap Analysis
- User Stories
- Acceptance Criteria
- Solution Design Document (SDD)
- Requirements Traceability Matrix (RTM)
- Test Strategy
- User Acceptance Testing (UAT)
- Change Readiness Plan
- Training Materials
- Deployment Plan
